

Importance of Measuring Trust in Organizations and Improving Trust Through Community Presence

Nov 5th, 2023

Aparna Sundar and Kris Freedain

Introductions

Aparna Sundar is a Senior Researcher at OpenSearch Project. She has over 20 years of experience in the field of research and design and actively publishes in the cognitive science domain.

Kris Freedain (he/him) is the Community Manager for the OpenSearch Project. He has decades of experience in tech, but finds connecting people to be the most fulfilling part of being a community professional.

Our employer: AWS. Not speaking on behalf of them. Our opinions are our own.

Agenda

- Trust in open source
- Recommendations to enhance community trust
- Metrics, Quarterly Survey 2023, Findings
- Importance of trust for OpenSearch Project and Amazon
- Practical involvement in community and recommendations

OpenSearch Project

Find the truth within your data

OpenSearch is the flexible, scalable, open-source way to build solutions for data-intensive applications. Explore, enrich, and visualize your data with built-in performance, developer-friendly tools, and powerful integrations for machine learning, data processing, and more.

OpenSearch Project Q1 community survey results

Sun, Mar 12, 2023 · Aparna Sundar

Thank you to the OpenSearch community members who responded to our Q1 community survey! Our first quarterly survey focused on understanding who our users are, what they use OpenSearch for, and establishing a baseline for how they feel about the current OpenSearch user experience. We are thrilled to report a net promoter score (NPS) of **57.8** and a UX health score of **77.2**, with **97** community members taking part in the survey.

We've recently launched a research program in order to get a holistic view of the OpenSearch user experience. The program is designed to evaluate a user's journey comprehensively using various research methodologies, including a quarterly survey. In addition to quarterly surveys, we also use "deep dives," which are qualitative

- Users identified with four roles in OpenSearch:
 - *Infrastructure Setup* – Responsible for deploying OpenSearch, for allocation of resources, responsible for allocation of initial resources, and any action that impacts the billing and usage of resources
 - *OpenSearch Admin* – Responsible for asset and user management
 - *Dashboard Creator or Data Producer* – Responsible for preparing data or dashboards for their own use or end user consumption
 - *Dashboard or Data Consumer* – Responsible for consuming data or dashboards

Findings

Trust in OpenSearch (AVG = 7.4 on a 10 point scale; $\alpha = .97$)

Findings

In your own words what do you dislike about the OpenSearch community?

- The project is not Apache or cncf or Linux
- that is not written in something like go which is less resource intensive
- Some maintainers are not empathic with requests - which only stands in contrast to how there are some amazing maintainers Not real beginner friendly like most open source communities.
- Not much. I'm not sure what the roadmap is, and not sure how much non-AWS involvement there is toward the platform.
- Most of the community meetings happens in the USA TZ(which is not feasible for folks in Asia), and there is not a good program to reward the community members for their efforts
- it is sometimes hard to discover the purpose of new features when you have no knowledge of the field (e.g. logs vs traces, but I might have missed a blog post)
- It is a less-functional rip-off of <something else> from what I can tell. It is extremely frustrating and difficult to get answers from the community.
- It feels overly confusing. Too many versions, too many "this thing is sorta like that, but it's a fork". It's just too spread out.
- Due to the "small" size, a lot of problems I still look up in <a different> forum
- Amazon is investing a lot in the solution. This is fantastic but also a risk. It would be better if there are more significant contributors.

Findings

In your own words what do you like about the OpenSearch community?

- Usually very friendly & quick to reply in slack.
- That you rescued it from *<someone else>*
- Responsive, friendly, open
- Openness, and good collaboration
- It is welcoming and I have feedback from the maintainers when I submit issues
- It feels open and inviting
- How it attempts to be helpful
- Functionality, open meetings, the devs at Amazon
- Community members on slack are helpful

Agenda

- Trust in open source
- Recommendations to enhance community trust
- Metrics, Quarterly Survey 2023, Findings
- **Importance of trust for OpenSearch Project and Amazon**
- Practical involvement in community and recommendations

Importance of trust for OpenSearch Project and Amazon

‘Earn Trust’ as a Leadership Principle

- Listen attentively, treat others respectfully, and always show respect for diverse perspectives
- Vocally self-critical, even when doing so is awkward or embarrassing.
- Work towards a common goal as equals

Open source at AWS

Since its inception, Amazon Web Services (AWS) has been the best place for customers to build and run open source software in the cloud. AWS is proud to support open source projects, foundations, and partners. We believe that open source is good for everyone and we are committed to bringing the value of open source to our customers, and the operational excellence of AWS to open source communities.

OpenSearch Community Meeting - 2023-10-31

Online

Join us for our online community meeting.

Meeting topics and passcode are listed in the [collaborative agenda](#) on the forum.

Feel free to comment on the agenda before the meeting if you want to add an item or have a question. Would you like to present? Reach out on the forum thread - we welcome community presentations.

After the meeting, we will post the chat log and any meeting notes. We welcome you to keep the conversation going on the forum.

By joining the OpenSearch Community Meeting, you grant OpenSearch, and our affiliates the right to record, film, photograph, and capture your voice and image during the OpenSearch Community Meeting (the "Recordings"). You grant to us an irrevocable, nonexclusive, perpetual, worldwide, royalty-free right and license to use, reproduce, modify, distribute, and translate, for any purpose, all or any part of the Recordings and Your Materials. For example, we may distribute Recordings or snippets of Recordings via our social media outlets.

Preview Code Blame 79 lines (45 loc) · 7.81 KB

The maintainers of the OpenSearch-Security Repo seek to promote an inclusive and engaged community of contributors. In order to facilitate this, weekly triage meetings are open-to-all and attendance is encouraged for anyone who hopes to contribute, discuss an issue, or learn more about the project. To learn more about contributing to the OpenSearch-security Repo visit the [Contributing](#) documentation.

Do I need to attend for my issue to be addressed/triaged?

Attendance is not required for your issue to be triaged or addressed. All new issues are triaged weekly.

What happens if my issue does not get covered this time?

Each meeting we seek to address all new issues. However, should we run out of time before your issue is discussed, you are always welcome to attend the next meeting or to follow up on the issue post itself.

How do I join the Backlog & Triage meeting?

Meetings are hosted regularly at 3 PM Eastern Time (Noon Pacific Time) and can be joined via the links posted on the [Upcoming Events](#) webpage.

Introducing concurrent segment search in OpenSearch

Wed, Oct 18, 2023 · [Andriy Redko](#), [Sorabh Hamirwasia](#)

OpenSearch is a scalable, flexible, and extensible open-source search and analytics engine. It is built on top of [Apache Lucene](#) and uses its powerful capabilities to ingest user data and serve search requests with latency in milliseconds.

Users are always looking for ways to improve their search performance. For latency-sensitive use cases, users are fine with scaling their clusters for improved latency at the cost of adding more resources. There are also users who already have available resources in their cluster and are still unable to improve the latency of their search requests. Apache Lucene constantly improves the search algorithms and heuristics, improvements into its engine. Some of them are straightforward significant system redesign. Concurrent segment search is a feature that reduces search latency across a variety of workload types.

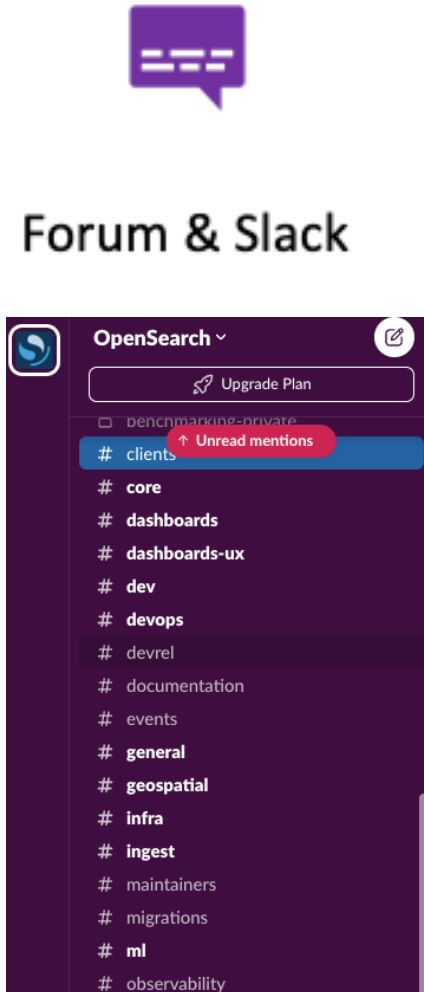

[Andriy Redko](#)

Andriy Redko is a seasoned software developer with a great passion to code, extensively working with JVM platform using Java, Groovy, Scala as well as other languages and technologies (Ruby, Grails, Play!, Akka, MySQL, PostgreSQL, MongoDB, Redis, JUnit, etc.).

code.dblock.org | tech blog

Making Raw JSON REST Requests to OpenSearch

OpenSearch clients implement various high-level REST DSLs to invoke OpenSearch APIs. Efforts such as opensearch-clients#19 aim at generating these from spec in order to always be up-to-date with the default distribution, including plugins. However this is a game that cannot be won. Clients will always lag behind, and users often find themselves in a situation that requires them to invoke an API that is not supported by the client. Thus, in opensearch-clients#62 I proposed we level up all OpenSearch language clients in their capability to make raw JSON REST requests. You help on these issues would be very much appreciated.

#62 [FEATURE] Make raw JSON REST requests to OpenSearch

Is your feature request related to a problem?

Developers want an easy, documented, way to make raw JSON REST requests to

Learn Vector Search "the Hard Way" with Doug Turnbull-Chicago Search Community

Hosted By
Joel M.

Details

Hello Chicago Search Enthusiasts,

We are thrilled to invite you to the next Search Community Chicago event featuring a renowned expert in the field, Doug Turnbull.

Topic: *Learning Vector Search the Hard Way*

Doug Turnbull's presentation will delve into the intricacies of "Learning Vector Search the Hard Way."

Doug is one of the authors of [AI-Powered Search](#) and [Relevant Search](#). Come learn from one of the leading experts in search!

We will meet at [The Studio at The Franklin](#) 227 W Monroe St, 21st floor, Chicago. **You will need to RSVP with an email to get a QR code to enter.**

Agenda:

- **6:00 PM - 6:20 PM:** Network
- **6:20 PM - 7:20 PM:** Present

 Charmed OpenSearch

Mehdi Bendriss (medib) | [Development](#) | [Server and Cloud](#)

2/candidate 2.10.0 ▾

OpenSearch makes it easy to ingest, search, visualize, and analyze your data.

Charmed OpenSearch is a snap packaged software from the upstream OpenSearch code base (<https://github.com/opensearch-project/OpenSearch>).

One benefit of using the Charmed OpenSearch snap package is that It bundles OpenSearch with other tools in its ecosystem to be used in an operator. One of the operators that uses this snap package is the Charmed OpenSearch (VM Operator) - <https://charmhub.io/opensearch>.

Version, Architecture and OS:

A snap version is a combination of both the application version and / (slash) the channel, e.g. 2/stable , 2/candidate , 2/edge .

This snap is available in a specific architecture, e.g. amd64 architecture and runs in a particular base OS called Core 22.

Appendix: Scale Items

Dependability

- When OpenSearch makes an important decision, I know it is concerned about the community
- I feel confident at OpenSearch's skills
- I think OpenSearch has the ability to accomplish what it says it will do
- I do not have to watch OpenSearch closely, as I know it will do the right thing

Control Mutuality

- OpenSearch and people like me are attentive to what we each say
- OpenSearch really listens to what people like me have to say
- When I have an opportunity to interact with OpenSearch, I feel that I have some sense of control over the situation

Commitment

- I feel OpenSearch is trying to maintain a long-term commitment with individuals like me
- Compared to other organizations, I value my relationship with OpenSearch more
- There is a long-lasting bond between OpenSearch and people like me
- I would rather work with OpenSearch rather than not
- I feel a sense of loyalty to OpenSearch

Satisfaction

- I am happy with OpenSearch
- Both OpenSearch and people like me benefit from the relationship
- People like me are happy in their interactions with OpenSearch
- Generally speaking, I am pleased with the relationship OpenSearch has established with people like me
- I feel people like me are important to OpenSearch

Communal Relationships

- OpenSearch is concerned about people like me
- OpenSearch helps people like me without expecting anything in return

Exchange Relationships

- When I see what OpenSearch has done, I feel compelled to contribute to the community
